

SOURCE-OF-TRUTH AUDIT

2026 People's Ranking Championship

Consolidated governing summary, contradiction register, and no-guess boundary

Prepared for: Redraft Blitz / People's Ranking Championship

Prepared by: Codex source review

Review date: July 17, 2026

Status: Read-only audit; no application code and no scoring changes

Source basis: Nine supplied files, reviewed as a byte-for-byte working snapshot

Executive verdict: The two Bible volumes provide a coherent authority hierarchy and a largely frozen product contract. The source set is not yet safe for scoring implementation because several mathematical definitions and frozen validation assets are missing, the workbook conflicts with the no-percent rule and contains stale cached results, and the current Fantasy Football Calculator sample is Half-PPR even though Volume II locks PPR ADP for Current Market Value.

Contents

- 1. Governing authority and conflict rules
- 2. Consolidated current product contract
- 3. Frozen scoring contract
- 4. Source-data and workbook audit
- 5. Contradictions, supersessions, and outdated rules
- 6. Missing decisions and missing artifacts
- 7. Items Codex must not guess
- 8. Approval sequence before implementation
- 9. Source manifest and reproducibility record

1. Governing authority and conflict rules

Use the following hierarchy whenever two sources appear to disagree. A supporting data file or test workbook never silently overrides a frozen Bible decision.

Authority	Controls	Current treatment
Volume I - Definitive Foundations	Mission, competition identity, scoring mathematics, expected-value curves, BVM rank-error method, frozen evidence, objective tiebreakers, tiers, fairness boundaries, and historical lineage.	Highest authority for scoring and competition fairness.
Volume II v1.0 -	Current Board Builder, identity, ownership, Official Entry,	Highest authority for current product

Authority	Controls	Current treatment
Definitive Product and UX	Championship Lock, visibility, Consensus, Leaderboard, data operations, launch requirements, and scope registers.	behavior. Explicit supersession only; silence does not supersede Volume I.
Final Official Rules + season configuration	Legally reviewed eligibility, dates, prizes, disputes, fulfillment, privacy references, and other approved UR resolutions.	Not yet supplied. May fill open configuration but may not contradict Volumes I or II.
Volume III - Technical Architecture	Implementation details, schemas, vendors, rate limits, security, accessibility, performance, monitoring, and acceptance-test design.	Not yet created. Must implement the locked contract without redefining it.
Workbook, CSVs, JSON, Player Pool, logo	Test fixtures, raw source samples, candidate seed data, and visual reference.	Evidence and inputs only. These sources do not set policy and cannot override the Bibles.

- Latest explicit, approved governing decision wins within its authority domain.
- Volume II may refine or supersede implementation details only where it says so explicitly.
- Any change affecting Board Accuracy, winners, ties, tiers, or historical comparability requires a new mathematical version and the complete frozen-benchmark process.
- Unresolved means required for launch; deferred means preserved for possible later promotion; excluded means do not build without explicit supersession.

Snapshot status

Register	Count	Meaning
Volume I locked decisions	48	Foundation record D-001 through D-048.
Volume II product decisions	74	Current product record Decisions #001 through #074.
Launch requirements	119	53 OPEN, 31 ENTRY, 11 LOCK, 21 W1, and 3 FINAL.
Deferred features	27	Not launch blockers; promotion requires a new decision and acceptance tests.
Unresolved items	9	External approvals or season configuration still required.
Intentional exclusions	45	Rejected or superseded behaviors that must not reappear by convenience.

2. Consolidated current product contract

Brand, mission, and information architecture

- Redraft Blitz is the parent brand; the People's Ranking Championship is the flagship product.
- Every Version 1 feature must help users draft better and/or increase PRC awareness, participation, or engagement.
- Primary Redraft Blitz navigation: Home, PRC, Rankings, Articles, Podcast, About.
- Primary PRC navigation: Home, My Board, Leaderboard, Awards & Prizes, Rules, FAQ.
- PRC leads the homepage. Rankings, Articles, and Podcast establish authority and feed the competition.

Board and Market Value

Rule	Locked current behavior
Official artifact	One complete ordered Top 150. No duplicate players or ranks; at least one intentional move from Market Value is required before entry.
Working list	One continuous list through rank 200 with a fixed Top 150 cutoff between ranks 150 and 151; the full eligible QB/RB/WR/TE pool remains searchable.
Movement	Drag-and-drop and inline Reposition are equivalent. Reposition accepts 1-200 and shifts intervening ranks once, autosaves, recalculates, and supports Undo.
Personal Ranking	Created only by direct user movement of that player. Passive displacement never creates one.
Tuesday synchronization	After administrator-approved MV publication, untouched players reorder around fixed Personal Rankings. User-choice update modes are excluded.
MV display	0-6 spots is neutral, 7-11 subtle, 12+ emphasized. Earlier than Current MV is green; later is red; color always has numeric/directional text.
MV finality	Official Entry stores Locked MV and ends all future MV synchronization for that Board.

Identity, protection, and ownership

- No traditional account is required. A browser-only guest draft can autosave and return in the same browser before the deadline.
- Protect My Board creates a server-side protected draft with a case-insensitively unique public Board Name and a private six-digit PIN displayed as 000 000.
- Recovery email is optional at protection and required/verified for Official Entry. Without recovery email or surviving browser access, staff do not override ownership.
- One verified email may create one official Board per season; this does not replace the broader one-person rule or its still-needed enforcement language.
- A protected unsubmitted draft freezes privately at Championship Lock as Draft Locked - Not Entered. A browser-only draft becomes permanently ineligible but never becomes an official record.

Official Entry, Championship Lock, and public reveal

Term/state	Definitive meaning
Official Entry	The individual server-confirmed action that captures the current Top 150, Board Name, Locked MV, verified email, and authoritative timestamp. It is immediate, one-time, and immutable.
Officially Enter My Board	Final action inside the centered My Board confirmation window after required checkboxes and email verification. This replaces the old LOCK MY BOARD flow.
Championship Lock	The field-wide deadline and simultaneous public reveal. It is not the name of an individual submission action.
Deadline test	A complete valid request received by the server before the deadline counts even if processing finishes later. Verification alone reserves nothing.
Before reveal	Submitted Top 150s remain private. Public pages may show only a randomized set of Board Names, Officially Entered status, and field size.
At reveal	Every valid official Board becomes public at its permanent URL without changing Board contents. People's Consensus is calculated at the same event.

Consensus, Leaderboard, and permanent Boards

- People's Consensus candidate pool is the union of players appearing in at least one official Top 150; an omission receives 151 on that Board; field averages are sorted and only the final Top 150 is published.
- Consensus launches as Redraft Blitz editorial/social content, not as a dedicated application page.
- After lock but before scoring, the Leaderboard shows 25 randomized, unnumbered public Boards. Ranked standings begin only after the first scored Tuesday.
- Active Leaderboard columns are limited to placement, Board Name, and Board Accuracy to two decimals. Full precision and detail live on the permanent Board page.
- Owner view and public view use the same permanent Board URL/component after reveal. Official Boards remain immutable through provisional and final scoring.

Awards and lifecycle

- Primary title: People's Ranking Champion, determined by final Board Accuracy and the objective tiebreaker ladder; receives the People's Cup and permanent recognition.
- First Round Crown: highest Top-12 Board Accuracy. Its exact calculation is not present in the supplied source set and must not be inferred.
- Random Draw: selected from remaining eligible participants; the Overall Champion and First Round Crown winner are excluded.
- At 5,000 official Boards, second- and third-place overall prizes unlock. Exact prizes and fulfillment remain unresolved.
- Weeks 1-17 Half-PPR count; Week 18 is excluded; all real-world outcomes after entry count. Tuesday results remain provisional until finalization after Week 17.

3. Frozen scoring contract

Protection rule: No scoring formula has been changed in this audit. The formulas below are transcribed from the governing sources; discrepancies are listed separately for approval.

Official complete-Board mathematics

Element	Governing definition
Positional error	For QB, RB, WR, and TE separately: $ \text{expected points at predicted positional rank} - \text{expected points at actual positional finish} $.
Positional Accuracy	$\max(0, 1 - \text{sum positional error} / \text{sum max(predicted EP, actual EP)}) \times 100$.
BVM Accuracy	$\max(0, 1 - \text{sum } \text{submitted overall rank or 151} - \text{final BVM rank} / 11,325) \times 100$, over the final BVM Top 150.
Board Accuracy	$0.80 \times \text{Positional Accuracy} + 0.20 \times \text{BVM Accuracy}$.
Missing final-reference player	BVM submitted rank becomes 151. This is independent from the separate Consensus omission rule that also uses 151.
Score floor	Positional Accuracy and BVM Accuracy are floored at zero.

Element	Governing definition
Ordering	Complete stored precision controls order; display rounding never creates an official tie.

Two different weighting layers

Do not conflate: The final BVM player-value reference uses 70% Season Value Over Replacement plus 30% Weekly Net Value Over Replacement. Board Accuracy (and the proposed Player Accuracy diagnostic) then use 80% Positional Accuracy plus 20% BVM Accuracy. The 70/30 blend is an input-reference construction, not a replacement Board formula.

- FantasyPros TTL is authoritative for cumulative Half-PPR points and supplies the season-value side of BVM.
- Completed Week 1-17 columns supply the weekly net-value side of BVM and the latest-week row display.
- FantasyPros RK and AVG are ignored for PRC scoring; GP is validation only; PRC creates its own positional order, BVM order, Player Accuracy, Board Accuracy, and Leaderboard.

Expected-value curves

Position	Volume I printed depth	Workbook depth	Additional workbook rows
QB	30	50	20
RB	60	100	40
WR	80	120	40
TE	40	60	20

Verified evidence: all 330 workbook curve rows rebuild exactly as simple three-season averages from the supplied 2023, 2024, and 2025 FantasyPros TTL results. Volume I prints only the leading 210 rows. No conflicting numeric value was found in the overlap, but the authoritative depth is not stated consistently and must be approved before implementation.

Leaderboard order and presentation

Objective tiebreaker ladder, in order:

1. Full unrounded Board Accuracy
2. Top-12 Board Accuracy
3. Top-24 Board Accuracy
4. Top-50 Board Accuracy
5. Top-100 Board Accuracy
6. Full unrounded BVM Accuracy
7. Full unrounded Positional Accuracy
8. Official tie only if every value remains identical

Board Accuracy	Tier
62.00+	Historic
60.00-61.99	Championship
58.50-59.99	Elite
57.00-58.49	Excellent
55.50-56.99	Strong
53.00-55.49	Competitive
50.00-52.99	Developing
Below 50.00	Off the Pace

No-percent rule: Board Accuracy is a 0-100 index, not the percentage of players ranked correctly. Display two decimals with no percent symbol. Percentile is the only public result that uses percentage language. Exact stored precision remains available on the permanent Board.

4. Source-data and workbook audit

FantasyPros historical/result CSVs

Current file	Mapped season	Rows	Eligible QB/RB/WR/TE	Weekly sum vs TTL
...HALF (2).csv	2023	697	627	37 rows differ; max 0.2
...HALF (1).csv	2024	713	636	33 rows differ; max 0.2
...HALF.csv	2025	723	649	30 rows differ; max 0.2

- The three filenames contain no season metadata. The mapping above is established by the workbook's explicit 2023/2024/2025 columns and exact value reconciliation; browser suffixes must never be used as a generic future-year rule.
- The 2025 workbook player table reconciles exactly to all 649 eligible 2025 CSV rows after separating source team suffixes; no value mismatch was found.
- Source-site rounding causes weekly displayed sums to differ from TTL by up to 0.2, confirming the locked rule that TTL is authoritative and must not be reconstructed.
- K, DST, and one historical OL row exist in the raw files and must be ignored for PRC scoring.

Fantasy Football Calculator API sample

Field	Observed in supplied JSON	Governing implication
Snapshot	2026-07-12 through 2026-07-17	Point-in-time evidence only; not a permanent feed guarantee.
Format	Half-PPR	Conflicts with Volume II's locked PPR ADP Current-MV architecture.
Drafts	727	Does not match Volume II's historical test example of 1,999 drafts.
Total players	174	Includes DEF and PK rows that must be filtered.

Field	Observed in supplied JSON	Governing implication
Eligible players	149: 66 WR, 45 RB, 20 QB, 18 TE	One fewer than the official Top 150; hybrid fallback ordering is therefore required for this snapshot.
Identity/completeness	174 unique player_id values; no required field is missing	Good source-key quality, but player_id is not a PRC Player ID.
Pool reconciliation	All 149 eligible API players appear in Player Pool.csv	Useful mapping evidence, subject to permanent-ID approval.

Player Pool.csv

Finding	Observed result	Why it matters
Depth	413 sequential QB/RB/WR/TE rows	Exceeds the launch target of approximately 250-300; approval is needed to adopt or trim it.
Position mix	168 WR, 110 RB, 73 TE, 62 QB	Broad enough for visible Top 200 and search, but source eligibility rules are not documented.
Visible sources	Yahoo blank on all 413; Sleeper blank on 168; RTSports blank on 145	Source coverage is incomplete and provenance/date/format are absent.
AVG reproducibility	406 of 413 AVG values are not the rounded mean of visible source columns; 131 rows have no visible source rank but still have AVG	AVG is opaque and cannot be treated as a documented formula.
API overlap	149 overlap; 264 pool players absent from current API sample	Consistent with a hybrid directory, but the file is not explicitly approved as the opening seed.
Alias issue	Eight JAC vs JAX team-code differences; no bye or position conflict	Requires an external-source alias map, not a player-identity split.
Identity gap	No PRC Player ID or external player IDs	Cannot satisfy Volume II's permanent identity contract without an approved crosswalk.

Board Accuracy Testing Lab v0.2

Finding	Status	Interpretation
Formula inventory	9,509 formulas across seven sheets; no literal formula-error strings	Workbook opens and is structurally readable.
Frozen source reconciliation	2025 player data and all 330 curve rows reconcile to the supplied CSVs	Strong evidence for the historical fixture.
Blank-input cache	Board Input is empty and Valid Rows is 0, yet cached Dashboard shows 50.9% positional, 0.0% BVM, 40.7% Board	Cached output is stale/internally inconsistent and must never be trusted without forced recalculation.
No-percent conflict	Dashboard formats all three scores as percentages	Violates Volume I's frozen public presentation rule.
Editable weights	Settings labels 80/20 weights Editable = YES	Acceptable only for a private sensitivity lab; forbidden as a production/user setting.
QA scope	Tests exact BVM order, BVM denominator, weight sum, and curve-row count	Does not test exact Positional Accuracy, perfect Board = 100, omissions, benchmarks, tiebreak windows, tiers, or Player Accuracy.
BVM data	Final BVM Rank and BVM Score are static values	The workbook can test 2025 Boards but does not reproduce the underlying 70/30 BVM reference construction.

Brand asset

Logo Blank Background.png is 1254 x 1254 RGB with no alpha channel. The checkerboard is baked into the pixels; it is not a transparent background. Do not place it over app surfaces as if transparent and do not infer a new crop, recolor, or vector master. Obtain an approved transparent PNG and preferably a vector master plus favicon/social variants.

5. Contradictions, supersessions, and outdated rules

Active contradictions and unsafe ambiguities

ID	Issue	Evidence	Safe treatment now
SC-01	Expected-value curve depth	Volume I prints 30/60/80/40; workbook uses 50/100/120/60.	Do not choose. Approve the full frozen depth or issue Volume I errata.
SC-02	BVM reproducibility	Volumes reference 70/30 VOR and a separate Scoring Engine Appendix; supplied workbook stores BVM ranks statically.	Do not implement BVM generation until the exact appendix, baselines, formulas, and fixture are approved.
SC-03	Score scale/presentation	Bibles specify a 0-100 no-percent index; workbook stores 0-1 and renders %.	Preserve mathematics; approve internal representation and enforce 57.53-style public output.
SC-04	Top-window tiebreakers	Ladder names Top-12/24/50/100 but supplied sources do not define each window's normalization/omission formula.	Do not infer. Needed for ranking ties and First Round Crown.
SC-05	Player Accuracy	Volume II locks an 80/20 row diagnostic but gives no exact per-player Positional/BVM component math.	Do not create a formula from Board Accuracy by analogy.
SC-06	Workbook state	Empty input and zero valid rows coexist with cached 40.7% Board result.	Treat displayed caches as invalid; force recalc and expand regression tests in any approved future lab.
DT-01	Current MV format	Volume II locks FFC PPR ADP; current supplied FFC JSON says Half-PPR.	Approve PPR retrieval or formally version a change to Half-PPR MV. Do not silently use the sample.
DT-02	FFC validation example	Volume II says 1,999 drafts/177 eligible; current sample has 727/149.	Treat the Bible numbers as a historical sample, not a feed invariant; define minimum coverage/fallback acceptance.
DT-03	Opening player pool	Volume II target is about 250-300 and source remains UR-003; Player Pool has 413 and opaque AVG.	Do not call it official until source, eligibility, size, provenance, and fallback are approved.
DT-04	Permanent identity	No PRC ID crosswalk is supplied; names/team codes are not authoritative.	Do not match production records by display name alone.
PROV-01	Document metadata	Both DOCX core properties report 2013 creation/modification despite July 2026 content/finalization.	Use filenames, content version, filesystem timestamps, and hashes; correct metadata only through an approved versioned copy.

Superseded or deferred foundation-era directions

Earlier direction	Current governing rule	Status
Generic Board Lock / LOCK MY BOARD	Officially Enter My Board is the individual action; Championship Lock is the field deadline/reveal.	Superseded implementation
Traditional account creation	Guest autosave plus Board Name/PIN protection, optional recovery email, verified entry email.	Superseded implementation
Only a visible Top 150	Working list shows 1-200; only 1-150 is submitted; full pool remains searchable.	Refined
User chooses update all / keep all / untouched only	Approved Tuesday MV automatically updates untouched players around Personal Rankings.	Excluded

Earlier direction	Current governing rule	Status
Immediate public proof of submitted Board	Submitted order remains private until Championship Lock; only names/status appear before reveal.	Superseded for fairness
Downloadable certificate and Board Number required for launch	Permanent URL, server timestamp, and receipt are launch proof; certificate/Board Number are deferred.	Deferred
Hall of Champions launch page	Champion permanence remains in the data model; a dedicated archive waits until a completed season exists.	Deferred
FantasyPros as vague final authority	FantasyPros CSV is the operational scoring-input contract, but use permission and backup remain unresolved; PRC calculates all ranks/scores.	Clarified / external approval open

6. Missing decisions and missing artifacts

Authoritative unresolved register (UR-001 through UR-009)

ID	Gate	Open item	Exact resolution still needed
UR-001	ENTRY	Championship deadline and timezone	Exact 2026 date, time, IANA timezone, public wording, and display rule.
UR-002	OPEN	Complete 2026 master calendar	Opening, final preseason MV, Championship Lock, Tuesday targets/correction windows, and finalization date.
UR-003	OPEN	Opening eligible player pool	Approved broad seed around 250-300, eligibility rules, permanent-ID mapping, and curated fallback.
UR-004	OPEN	Current MV source terms/fallback	FFC commercial terms, attribution, rate/availability limits, archival rights, access method, and tested fallback.
UR-005	W1	Weekly scoring-data rights/backup	FantasyPros lawful use, export availability, correction handling, and a backup that reproduces the required contract.
UR-006	ENTRY	Final Official Rules	Geography/state limits, proof, one-person enforcement, failures/cancellation, disputes, taxes, sponsor and public rule language.
UR-007	ENTRY	Final prizes and fulfillment	Amounts/items, inventory, budget, sponsor commitments, shipping, tax, replacement, and tied-winner production.
UR-008	ENTRY	Privacy, Terms, retention, rights	Retention/deletion, tokens, email/PIN, analytics/cookies, vendors, public permanence, corrections, contact, and request handling.
UR-009	OPEN	Board Name moderation	Reserved/prohibited terms, impersonation/trademark/profanity/hate policy, forced rename, notice, appeals, and audit trail.

Scoring and reproducibility artifacts not supplied

- The separate Scoring Engine Appendix v0.2 referenced by Volume II, including exact Season VOR, Weekly Net VOR, replacement baselines, normalization, weekly aggregation, 70/30 construction, and known fixtures.
- RB_Value_Score_Results (4).csv, identified by Volume I as the final BVM reference source.
- The exact Top-12, Top-24, Top-50, and Top-100 Board Accuracy calculation specifications.
- The exact row-level Player Accuracy formula and edge-case rules.
- The live-field percentile formula, tie treatment, and display rounding rule.
- PRC_Benchmark_Suite_v1_FIXED.xlsx, PRC_100K_Simulation_Validation_Lab_v1.xlsx, row-level simulation results, dispersion/tie lab, and expert-board validation files named in Volume I.
- A permanent PRC Player ID crosswalk covering Player Pool, FFC player_id, FantasyPros aliases, suffixes, team-code aliases, and position history.

- Approved source permission/terms records, attribution text, access method, archival policy, and tested fallbacks for opening pool, MV, and scoring.
- An approved transparent/vector Redraft Blitz logo master and required deployment variants.

7. Items Codex must not guess

9. Which expected-value curve depth is the frozen production version: Volume I's printed 210 rows or the workbook's full 330 rows.
10. Any missing formula inside the 70% Season VOR / 30% Weekly Net VOR BVM construction.
11. Whether production stores scores as 0-1 or 0-100; public display must remain the unchanged no-percent 0-100 index.
12. How Top-12/24/50/100 window scores, First Round Crown, and true-tie calculations are normalized.
13. How the individual Player Accuracy components are calculated or normalized.
14. Whether the supplied Half-PPR FFC sample replaces the locked PPR Current-MV source decision.
15. Whether Player Pool.csv is the approved opening seed, whether 413 players are eligible, how AVG was produced, or how the pool should be trimmed.
16. Any production identity match based only on name, team, suffix, or position.
17. The 2026 deadline, timezone, publication calendar, correction windows, or finalization date.
18. Source-use permission, attribution, rate limits, or backup rights.
19. Final prizes, legal eligibility, privacy/retention, dispute rules, tax treatment, or Board Name moderation policy.
20. A transparent/recolored/cropped logo variant from the supplied baked-checkerboard RGB file.

8. Approval sequence before implementation

21. Freeze a Scoring Specification Pack: approve curve depths, supply the Scoring Engine Appendix, supply/rebuild the final BVM reference, define Top-N tiebreakers, Player Accuracy, percentile, score representation, and complete regression fixtures. No scoring code before this pack is approved.
22. Approve the Player Data Pack: select the opening seed and size, choose PPR versus Half-PPR for Current MV, approve permanent ID mappings, source aliases, source terms/attribution, archival behavior, and tested fallbacks.
23. Resolve UR-001 through UR-009 at their required gates: season calendar, legal rules, prizes, privacy, moderation, and source permissions.
24. Create Volume III only after the product and data approvals above. Volume III should turn LR-001 through LR-119 into architecture, schemas, admin controls, security/accessibility/performance tests, and release gates without changing behavior.
25. Begin application implementation only from the approved Volume III and versioned source packs. Preserve all original source hashes and issue explicit errata/new versions instead of silently editing frozen artifacts.

9. Source manifest and reproducibility record

The review used a read-only working snapshot. The Excel source was open in another process, so it was copied with shared-read access and then hashed; no source file was modified.

Source	SHA-256	Role / review note
Volume I DOCX	2E90EA86B03EA6225A237B1D4012EA5783A9F4FEE7928A97007B8D0EE2691866	Foundation authority; finalized content July 2026; stale 2013 core metadata.
Volume II v1.0 DOCX	E414099637B90923BDDFB028A902EA3D34E84471462E9828D5EBB25847343AFD	Product/UX authority; 74 decisions, 119 requirements, frozen July 17, 2026.
Testing Lab v0.2 XLSX	930873A595B18929621E2724637535C4FD93DFF563AD96CF982A14F3EB0C2350	Historical test fixture; does not override Bible rules; stale cached Dashboard values.
FantasyPros HALF.csv	9D2C22480B1C86B9005ACCB196BCFC544D4E8F011F77D4848905B20215E3D5F0	Mapped to 2025 by workbook reconciliation.
FantasyPros HALF (1).csv	BE197FAC95FD0E29071053E0EF956710334EADB16D757775BD8ECEA4EF788FA4	Mapped to 2024 by workbook reconciliation.
FantasyPros HALF (2).csv	52043D4B84D0BFB2463069D0F93C0D472987A8ABD5DDB447A3A19C67C9CCBB10	Mapped to 2023 by workbook reconciliation.
Player Pool.csv	108945800E17623A5A76093C9C63D81B624831C50D730D632068E804F5C42C37	Candidate broad pool; not approved; 413 rows and opaque AVG provenance.
FFC API JSON sample	B0A2A6EFA6A490C09264DE49C4C9454360B0F94E4795269134AF241AF93106DA	Point-in-time Half-PPR sample, July 12-17, 2026; 727 drafts and 149 eligible players.
Logo Blank Background.png	9E2670EC699260E9F80D4457F0DFAA6655331D520D81C015ED5F0E6843EA64B5	1254x1254 RGB; no alpha; checkerboard is baked in.

Review limitations

- The two DOCX sources were extracted completely, including all paragraphs/tables, core properties, sections, headers/footers, comments, and tracked-change checks. Neither document contains comments or tracked revisions.
- LibreOffice is not installed in this environment and Microsoft Word automation was unavailable in the non-interactive session, so source and final DOCX visual rendering could not be completed. Structural checks and workbook image renders were used instead.
- Volume I's frozen validation claims can be summarized but cannot be independently rerun from this source set because the named benchmark, simulation, expert-board, tie-stress, and final BVM artifacts were not supplied.

Final handoff: This document is a consolidation and audit, not a new Bible version. It does not approve an unresolved item, supersede a decision, modify a formula, or authorize application implementation. The next safe action is an explicit approval round for the Scoring Specification Pack and Player Data Pack.
